## Explanation of Graphical Symbols Explication des symboles

The lightning flash with arrowhead symbol within an equilateral triangle is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

L'éclair avec une flèche à l'intérieur d'un triangle équilatéral est destiné à attirer l'attention de l'utilisateur sur la présence d'une « tension dangereuse » non isolée à l'intérieur de l'appareil, pouvant être suffisamment élevée pour constituer un risque d'électrocution.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

Le point d'exclamation à l'intérieur d'un triangle équilatéral est destiné à attirer l'attention de l'utilisateur sur la présence d'instructions importantes sur l'emploi ou la maintenance (réparation) de l'appareil dans la documentation fournie.

## IMPORTANT SAFETY INSTRUCTIONS

- 1 Read these instructions.
- 2 Keep these instructions.
- 3 Heed all warnings.
- 4 Follow all instructions.
- 5 Do not use this apparatus near water.
- 6 Clean only with dry cloth.
- 7 Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- 8 Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9 Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- 10 Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
- 11 Only use attachments/accessories specified by the manufacturer.
- 12 Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
- 13 Unplug this apparatus during lightning storms or when unused for long periods of time.
- 14 Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

## PLEASE READ CAREFULLY BEFORE PROCEEDING

Please keep this manual in a safe place for future reference.

### **WARNING**

**Always follow the basic precautions listed below to avoid the possibility of serious injury or even death from electrical shock, short-circuiting, damages, fire or other hazards. These precautions include, but are not limited to, the following:**

#### Power supply/power cord

- Do not place the power cord near heat sources such as heaters or radiators, and do not excessively bend or otherwise damage the cord, place heavy objects on it, or place it in a position where anyone could walk on, trip over, or roll anything over it.
- Only use the voltage specified as correct for the device. The required voltage is printed on the name plate of the device.
- Use only the supplied power cord/plug.
- Check the electric plug periodically and remove any dirt or dust which may have accumulated on it.
- When setting up the device, make sure that the AC outlet you are using is easily accessible. If some trouble or malfunction occurs, immediately turn off the power switch and disconnect the plug from the outlet. Even when the power switch is turned off, as long as the power cord is not unplugged from the wall AC outlet, the device will not be disconnected from the power source.
- Remove the electric plug from the outlet when the device is not to be used for extended periods of time, or during electrical storms.
- Be sure to connect to an appropriate outlet with a protective grounding connection.

#### Do not open

- This device contains no user-serviceable parts. Do not open the device or attempt to disassemble the internal parts or modify them in any way. If it should appear to be malfunctioning, discontinue use immediately and have it inspected by qualified Yamaha service personnel.

#### Water warning

- Do not expose the device to rain, use it near water or in damp or wet conditions, or place on it any containers (such as vases, bottles or glasses) containing liquids which might spill into any openings. If any liquid such as water seeps into the device, turn off the power immediately and unplug the power cord from the AC outlet. Then have the device inspected by qualified Yamaha service personnel.
- Never insert or remove an electric plug with wet hands.

#### Hearing loss

- Do not use the device for a long period of time at a high or uncomfortable volume level, since this can cause permanent hearing loss. If you experience any hearing loss or ringing in the ears, consult a physician.
- When turning on the AC power in your audio system, always turn on the device LAST, to avoid hearing loss and speaker damage. When turning the power off, the device should be turned off FIRST for the same reason.

#### Fire warning

- Do not place any burning items or open flames near the device, since they may cause a fire.

#### If you notice any abnormality

- If any of the following problems occur, immediately turn off the power switch and disconnect the electric plug from the outlet.
  - The power cord or plug becomes frayed or damaged.
  - Unusual smells or smoke are emitted.
  - Some object has been dropped into the device.
  - There is a sudden loss of sound during use of the device.
  - Cracks or other visible damage appear on the device.
 Then have the device inspected or repaired by qualified Yamaha service personnel.

- If this device should be dropped or damaged, immediately turn off the power switch, disconnect the electric plug from the outlet, and have the device inspected by qualified Yamaha service personnel.

### **CAUTION**

**Always follow the basic precautions listed below to avoid the possibility of physical injury to you or others, or damage to the device or other property. These precautions include, but are not limited to, the following:**

#### Power supply/power cord

- When removing the electric plug from the device or an outlet, always hold the plug itself and not the cord. Pulling by the cord can damage it.

#### Location

- Do not place the device in an unstable position where it might accidentally fall over and cause injuries.
- When installing the device:
  - Do not cover it with any cloth.
  - Do not install it on a carpet or rug.
  - Make sure the top surface faces up; do not install on its sides or upside down.
  - Do not use the device in a confined, poorly-ventilated location. Inadequate ventilation can result in overheating, possibly causing damage to the device(s), or even fire. Make sure that there is adequate space around the device: at least 20cm above, 20cm at the sides and 20cm behind.
- Do not press the rear panel of the device against the wall. Doing so may cause the plug to come in contact with the wall and detach from the power cord, resulting in short circuiting, malfunction, or even fire.
- Do not place the device in a location where it may come into contact with corrosive gases or salt air. Doing so may result in malfunction.
- Before moving the device, remove all connected cables.
- (HS8I/HS7I/HS5I only)
  - Any necessary construction work should be performed in accordance with construction-related regulations, and done always by a trained professional. If the device installation requires construction work, make sure to observe the following precautions.
    - Choose mounting hardware and an installation location that can support the weight of the device.
    - Avoid locations that are exposed to constant vibration.
    - Use the required tools to install the device.
    - Inspect the device periodically.

#### Connections

- Before connecting the device to other devices, turn off the power for all devices. Also, before turning the power of all devices on or off, make sure that all volume levels are set to the minimum. Failing to do so may result in electric shock, hearing loss, or equipment damage.

#### Maintenance

- Remove the power plug from the AC outlet when cleaning the device.

#### Handling caution

- Do not insert your fingers or hands in any gaps or openings on the device (ports).
- Avoid inserting or dropping foreign objects (paper, plastic, metal, etc.) into any gaps or openings on the device (ports). If this happens, immediately turn off the power, unplug the power cord from the AC outlet, and have the device inspected by qualified Yamaha service personnel.
- Do not rest your weight on the device or place heavy objects on it, and avoid use excessive force on the buttons, switches or connectors to prevent injuries.
- Do not operate the device if the sound is distorting. Prolonged use in this condition could cause overheating and result in fire.
- Avoid pulling the connected cables to prevent injuries.

Yamaha cannot be held responsible for damage caused by improper use or modifications to the device.

# NOTICE

To avoid the possibility of malfunction/ damage to the product, damage to data, or damage to other property, follow the notices below.

## ■ Handling and maintenance

- Do not use the device in the vicinity of a TV, radio, AV equipment, mobile phone, or other electric devices. Otherwise, the device, TV, or radio may generate noise.
- Do not expose the device to excessive dust or vibration, or extreme cold or heat (such as in direct sunlight, near a heater, or in a car during the day), in order to prevent the possibility of panel disfiguration, unstable operation, or damage to the internal components.
- Do not place vinyl, plastic or rubber objects on the device, since this might discolor the panel.
- When cleaning the device, use a dry and soft cloth. Do not use paint thinners, solvents, cleaning fluids, or chemical-impregnated wiping cloths.
- Condensation can occur in the device due to rapid, drastic changes in ambient temperature—when the device is moved from one location to another, or air conditioning is turned on or off, for example. Using the device while condensation is present can cause damage. If there is reason to believe that condensation might have occurred, leave the device for several hours without turning on the power until the condensation has completely dried out.
- During extreme changes in temperature or humidity, condensation may occur and water may collect on the surface of the device. If water is left, the wooden parts may absorb the water and be damaged. Make sure to wipe any water off immediately with a soft cloth.
- Do not place the speaker face down.
- These speakers should be used vertically, not laid on their side.
- Avoid touching or allowing objects to come in contact with the speaker diaphragms.
- Air blowing out of the bass reflex ports is normal, and often occurs when the speaker is handling program material with heavy bass content.
- Always turn the power off when the device is not in use.

## ■ Connectors

- XLR-type connectors are wired as follows (IEC60268 standard): pin 1: ground, pin 2: hot (+), and pin 3: cold (-).

## Connectable cables

### ■ XLR type

XLR type connectors are widely used in professional audio equipment and installations. The XLR type connectors provided on the HS series speakers are primarily intended for use with balanced connections.

### ■ Phone type

Phone type connectors can be used for both unbalanced and balanced connections.

Cables fitted with TRS (tip, ring, sleeve) phone plugs are necessary for balanced connections to the HS series speakers. The construction of TRS phone plugs is basically the same as stereo phone plugs.

For unbalanced connections, connect standard mono phone plug cables to the HS speaker phone connectors.

### ■ RCA pin

Source devices that only have RCA pin type output connectors can be connected via RCA pin plug to phone plug conversion cables (cables with an RCA pin plug on one end and a phone plug on the other). Connections using RCA pin plug to phone plug conversion cables are unbalanced.

**Balanced connections:** These effectively cancel noise picked up from external sources. Balanced connections allow for longer cable runs that would probably otherwise result in more noise being picked up.

**Unbalanced connections:** Commonly used to connect electronic musical instruments and guitars, etc., to amplification equipment. If your cable runs do not extend past one or two meters, unbalanced cables can probably be used without any problems.

### IMPORTANT NOTICE FOR THE UNITED KINGDOM

#### Connecting the Plug and Cord

**WARNING:** THIS APPARATUS MUST BE EARTHED IMPORTANT. The wires in this mains lead are coloured in accordance with the following code:

GREEN-AND-YELLOW : EARTH  
BLUE : NEUTRAL

# Rear Panel

The HS8/HS7/HS5/HS8S switches and connectors are located on the rear panel, as described below.

## HS8/HS7/HS5

## Speaker Input and Response Control

### 1 LEVEL control

Adjusts the output level of the speaker. When set to the 12-o'clock position the speaker is optimized for a nominal input level of +4 dB.

### 2 INPUT 1/2 connector

These connectors receive the input signal to the speaker. Two input connectors are provided: one balanced XLR connector, and one balanced (TRS) phone jack.

**NOTE** The XLR and phone jack input connectors can not be used simultaneously. Use only one input connector at a time.

**NOTE** Refer to "Connectable cables" on page 5 for more connector details.

### 3 ROOM CONTROL switch

Adjusts the speaker's low-frequency response. This switch can be used to compensate for exaggerated low-frequency response that can be caused by reflections in some listening environments. Setting the switch to the [0] position produces a flat frequency response. The [-2 dB] setting attenuates the range below 500 Hz by 2 dB, and the [-4 dB] setting attenuates the range below 500 Hz by -4 dB.

### 4 HIGH TRIM switch

Adjusts the speaker's high-frequency response. Setting the switch to the [0] position produces a flat frequency response. The [+2 dB] setting boosts the range above 2 kHz by 2 dB, while the [-2 dB] setting attenuates the range above 2 kHz by -2 dB.

### 5 Power switch

Turns power to the speaker ON or OFF. Rock the switch to the right [ I ] to turn the power ON, or to the left [ ⏻ ] to turn the power OFF. The logo on the front panel will light when the power is ON.

#### NOTICE

- Turning the power switch ON and OFF in rapid succession can cause the device's electronics to malfunction. Please wait for 3 seconds or more after turning the power OFF before turning it ON again.
- Even when the power switch is turned off, electricity is still flowing to the product at the minimum level. When you are not using the product for a long time, make sure to unplug the power cord from the wall AC outlet.

### 6 AC IN connector

Connect the supplied power cable here. First connect the power cord to the speaker, then insert the power cord plug into the AC outlet.

# HS8S (Subwoofer)

## Subwoofer Connections

### 1 INPUT L/R connector

These connectors receive the input signal to the subwoofer. Balanced XLR and balanced phone jack connectors are provided for both the L and R inputs. The L and R inputs can be used simultaneously. Signals supplied to both the L and R inputs are mixed internally.

**NOTE** The XLR and phone jack input connectors can not be used simultaneously. Use only one input connector at a time.

**NOTE** Refer to "Connectable cables" on page 5 for more connector details.

## HS8S signal flow

## Connecting the Subwoofer to the HS8/HS7/HS5 Speakers

### 2 OUTPUT L/R connectors

These are the subwoofer's output connectors. The input signals received at the INPUT L and R connectors are output via the OUTPUT L and R connectors, respectively. Low frequency reproduction characteristics can be adjusted via the LOW CUT switch and LOW CUT control.

### 3 LOW CUT switch

When this switch is ON, the low frequencies are attenuated prior to output via the OUTPUT L and R connectors at the frequency set by the LOW CUT control. The low-frequency attenuation cutoff frequency can be adjusted via the LOW CUT control.

### 4 LOW CUT control

Adjusts the low-frequency attenuation cutoff frequency between 80 Hz and 120 Hz when the LOW CUT switch is ON.

## Subwoofer Response Control

### 5 HIGH CUT control

Sets the cutoff frequency for subwoofer output high-frequency attenuation from 80 Hz to 120 Hz.

### 6 PHASE switch

Switches the phase of the subwoofer output. This switch should be set to [NORM.] in most situations, but in combination with some speakers and in some speaker layouts switching to the [REV.] setting may improve low-frequency response. Select the setting that provides the best bass response in your system.

### 7 LEVEL control

Adjusts the subwoofer output level.

### 8 Power switch

Turns power to the subwoofer ON or OFF. Rock the switch to the right [ I ] to turn the power ON, or to the left [ ⏻ ] to turn the power OFF. The logo on the front panel will light when the power is ON.

#### NOTICE

- Turning the power switch ON and OFF in rapid succession can cause the device's electronics to malfunction. Please wait for 3 seconds or more after turning the power OFF before turning it ON again.
- Even when the power switch is turned off, electricity is still flowing to the product at the minimum level. When you are not using the product for a long time, make sure to unplug the power cord from the wall AC outlet.

### 9 AC IN connector

Connect the supplied power cable here. First connect the power cord to the subwoofer, then insert the power cord plug into the AC outlet.

# Setup

In this section we'll look at the general procedure for connecting and setting up a monitor speaker system. This is just an example though, so feel free to set up your own system in the way that best serves your personal listening needs.

## Cables

You'll need to acquire appropriate cables to connect the HS series monitor speakers to your audio interface or other source equipment.

- **Short, high-quality cables**

Use high-quality cables of the shortest practical length. The longer the cable, the more chance there is that noise will creep in to degrade your sound.

- **Balanced cables**

Balanced cables are more resistant to noise than unbalanced cables. If you have to use unbalanced cables because the source equipment only has unbalanced outputs, be sure to use the shortest possible unbalanced cables.

### ■ Recommended cables

- For connection to a balanced phone jack input.

- For connection to an unbalanced phone jack input.

**NOTE** Refer to "Connectable cables" on page 5 for more connector details. The configurations of the balanced and unbalanced phone jack connectors are different.

## Connections

### NOTICE

Plug the supplied AC power cord into the corresponding socket on the speaker. Plug the power cord into the speaker first, and then insert the AC plug end into an appropriate AC wall outlet.

### Connecting to an Audio Interface

When connecting an audio interface (Steinberg UR or MR series, etc.) to HS series speakers, connect the audio interface output connectors directly to the speakers' input connectors. Normally you'll connect to the LINE OUT 1 and 2 (1L and 2R outputs), although that might depend on the specific audio interface and DAW (Digital Audio Workstation) settings used.

### Connecting to a Mixer

When connecting a mixer (Yamaha MGP or MG series, etc.) to HS series speakers, connect the mixer's MONITOR OUT or C-R OUT (Control Room) connectors directly to the speakers' input connectors. This makes it possible to control the monitor level independently from the mixer's main bus level.

## ■ Recommended cables

- For connection to a balanced XLR input.

HS8/HS7/HS5

- For connection to an unbalanced phone jack input.

HS8/HS7/HS5

**NOTE** Refer to “Connectable cables” on page 5 for more connector details. The configurations of the balanced and unbalanced phone jack connectors are different.

## Connecting to a Synthesizer or Other Electronic Musical Instrument

When connecting an electronic musical instrument such as a Yamaha MOTIF synthesizer to the HS series speakers, connect the instrument's L/MONO and R outputs to the HS speaker inputs.

## ■ Recommended cables

- For connection to an unbalanced phone jack input.

HS8/HS7/HS5

**NOTE** Refer to “Connectable cables” on page 5 for more connector details. The configurations of the balanced and unbalanced phone jack connectors are different.

## Setting Up for Superior Sound

A number of points should be observed when laying out a monitor speaker system.

### ■ Point 1

**Position speakers at least 1.5 meters away from walls or corners.**

Ideally, the speakers should be located at least 1.5 meters away from walls or corners. In situations where it is not possible to position the speakers a sufficient distance from walls or corners, the ROOM CONTROL switch can be used to compensate for excessive bass. As you move the speaker closer to walls or corners, a higher compensation setting may be required to achieve natural sounding response ([0] → [-2] → [-4]).

## ■ Point 2

### Position the left and right speakers symmetrically.

The left and right speakers should be positioned as symmetrically as possible in relation to the room. In other words, the left and right speakers should be the same distance from the rear wall and the respective left and right walls.

## ■ Point 3

### The optimum listening position is at the apex of an equilateral triangle.

For the most accurate sound and balance, position yourself at the apex of an equilateral triangle formed by the left and right speakers and yourself, with the speakers angled inward so that they're facing you.

## ■ Point 4

### Position the tweeters at ear height.

High frequencies are quite directional, so for the most accurate monitoring the speakers should be set up so that the tweeters are at approximately the same height as your ears when you're seated at the listening position.

## HS8/HS7/HS5 Settings

Once the physical layout of your monitor system is finalized, you can begin making the following settings.

- 1 Turn the level/volume controls on all source equipment (audio interface, etc.) all the way down.**
- 2 Set the HS8/HS7/HS5 LEVEL control to the 12-o'clock position, and set both ROOM CONTROL and HIGH TRIM switches to 0 dB.**
- 3 Turn the power to connected audio source devices on first, and then turn on power to the speakers.**

#### NOTICE

When turning power off, turn off the speakers first, and then turn off connected audio source devices.

- 4 Play some source material and gradually raise the level/volume controls on the source equipment.**

#### NOTICE

Be careful not to suddenly apply an excessively loud signal to the system. Excessive level can damage the speakers.

- 5 Set the listening level to a level at which you can listen comfortably without fatigue for an extended period of time.**

**NOTE** If necessary, adjust the ROOM CONTROL and HIGH TRIM switches for the most natural response (refer to page 6).

## Adding a Subwoofer (HS8S)

Adding a subwoofer to your monitor system can significantly improve its low-frequency fidelity, making it possible to create better overall mixes.

The subwoofer is normally placed on the floor between the left and right full-range speakers, but since the subwoofer reproduces low frequencies below 200 Hz that are relatively non-directional, subwoofer positioning is not critical.

Four cables are required: two to connect the audio interface or other source equipment to the HS8S subwoofer, and two more to connect the subwoofer to the left and right HS8/HS7/HS5 main speakers.

The connections are made as shown below.

#### NOTICE

Plug the supplied AC power cord into the corresponding socket on the speaker. Plug the power cord into the speaker first, and then insert the AC plug end into an appropriate AC wall outlet.

## ● Recommended cables

**NOTE** Refer to “Connectable cables” on page 5 for more connector details. The configurations of the balanced and unbalanced phone jack connectors are different.

## ■ Settings for Speakers Plus Subwoofer

Once the subwoofer connections have been made and the layout is finalized, you can begin making the following settings.

- 1 Turn the level/volume controls on all source equipment (audio interface, etc.) all the way down.**
- 2 Set the HS8/HS7/HS5 LEVEL control to the 12-o'clock position, and set both ROOM CONTROL and HIGH TRIM switches to 0 dB.**

- 3 Set the HS8S LEVEL control to 0, the HIGH CUT and LOW CUT controls to their 12-o'clock positions, and set the LOW CUT switch to OFF.**

- 4 Turn power on in the following order: audio source devices, then subwoofer, and finally the full-range speakers.**

### NOTICE

Turn power off in the following order: full-range speakers, then subwoofer, and finally audio source devices.

- 5 Play some source material and gradually raise the level/volume controls on the source equipment.**

### NOTICE

Be careful not to suddenly apply an excessively loud signal to the system. Excessive level can damage the speakers.

- 6 Set the HS8S LEVEL control to between 10 and 12 o'clock, and turn the LOW CUT switch ON.**

- 7 Set the listening level to a level at which you can listen comfortably without fatigue for an extended period of time.**

**NOTE**

- If necessary, adjust the ROOM CONTROL and HIGH TRIM switches for the most natural response (refer to page 6).
- If necessary, adjust the LOW CUT and HIGH CUT controls and the PHASE switch for the most natural response (refer to page 7).

## Installing Brackets (HS8I/HS7I/HS5I only)

HS8I/HS7I/HS5I can be installed with optional brackets. Two screw holes for installing the brackets are located on each of the four surfaces (top, bottom, left and right).

Refer also to the bracket installation manual. Note that there are two sets of screws: those that are originally installed in the speaker cabinet (to plug the installation holes) and those (for bracket installation) that are included in the product package. When installing brackets to the speaker, remove the original screws and make sure to use only the screws included in the product package for bracket installation.

### ⚠ Caution

- Construction work should be carried out by a professional constructor.
- Do not install the speaker transversely.
- Make sure not to touch the cone when installing.
- For optimum safety, the installation should be checked thoroughly at regular intervals. Some fittings may deteriorate over extended periods of time due to wear and/or corrosion, or the mounted parts may loosen.
- When choosing the installation location such as wall and ceiling and mounting hardware (bolts, nuts), make sure all are strong enough to support the weight of the speaker.
- Make sure to properly use the safety wire to prevent the speaker from falling down in the event of an installation failure.
- When installing the safety wire to the ceiling or wall, install it higher than the wire's attachment point on the speaker to reduce slack. Also, ensure that the installation height and location would pose no danger to people should the speaker fall.
- Yamaha does not assume any responsibilities for accidents such as dropping due to insufficient strength at attachment points or inadequacy of the mounting method.
- The recommended tightening torque for installing the included screws for bracket installation is 6.2 Nm for the M8 screw (HS8I and HS7I) and 2.4 Nm for the M5 screw (HS5I).
- Use safety wires with the following specifications.

Diameter	Ø3.0 mm or more
Length	Less than 600 mm
